PRESS RELEASE

Local Government Supports Advanced Manufacturing Facility

BACKGROUND

Synergy Composites Ltd was founded in 2007 by its current directors, who had identified a requirement for an advanced composite manufacturing facility in the Northwest region. Previously, they have consulted for large multinational organisations in the UK and Europe. They firmly believe that the advancements in composite manufacturing techniques can be embraced further. Synergy offers the complete advanced composite manufacturing capability, with the knowledge and skills to deliver all processes such as hand-lay (Prepreg), through to RTM and VaRTM. Our equipment compliments our standards with a class 7 cleanroom, specialist high temp autoclave, various ovens, large CMM etc, all controlled by a central ERP and MRP system to provide exacting quality.

MAIN STORY

Hyndburn Borough Council has identified Synergy Composites as being strategically important to the region and as such, the regeneration department have provided support for Synergy by approving the maximum grant available under the Finance for Growth scheme. This funding, along with internal investment, has allowed Synergy to purchase new composite manufacturing equipment which will provide a much needed resource for the local composite supply chain.

Synergy are currently stepping through the initial phases of obtaining international, aerospace and customer related approvals, which will position them to receive tactical and strategic offload from suppliers such as BAE Systems, Rolls Royce and Aircelle. They aim to deliver a cost effective service that is built around the quality of their products, whilst building close relationships with their customers.

Synergy intends to continue developing its capabilities and is a firm believer in cross sector transfer of information. This belief has seen Synergy developing materials and processes for non-aerospace organisations and currently they are progressing various onshore and offshore opportunities within the renewable industry.

Mr Lee Moffatt, Operations Director, has stated that, 'diversification and the cross sector transfer of information is essential when developing a supply chain fit for the future'. The ASCE programs are evidence of this progress.
